SUMMARY

Full-Stack Developer specializing in **Next.js, TypeScript, and PostgreSQL**, building complete Arabic-first (RTL) products end to end: data modeling, APIs, AI integrations, payments, and UI. Designs own interfaces in Figma, with custom themes and design systems rather than generic templates.Built and deployed several production-ready applications, including an AI-powered wellness SaaS with subscription billing, a multi-branch restaurant ERP with a transactional inventory engine, and an adaptive English-learning platform backed by 196 automated tests. Previously contracted on an enterprise Laravel + React platform, working on financial and HR modules. Open to on-site, hybrid, and remote roles.

SKILLS

- **Languages:** TypeScript, JavaScript, SQL, PHP, Python.
- **Frontend:** Next.js (App Router), React, Tailwind CSS, shadcn/ui, TanStack Query, Zustand, GSAP, RTL/bidirectional UI.
- **Backend & Data:** Node.js, Hono, Laravel, PostgreSQL, Supabase, Drizzle ORM, Prisma, REST API design, Zod, Clerk, Better Auth, OAuth.
- **AI & Integrations:** Vercel AI SDK, Google Gemini, OpenRouter, Mistral OCR, Model Context Protocol (MCP), Polar payments, Web Push, n8n.
- **Tooling & Quality:** Git, Docker, Vercel, Upstash Redis, Sentry, PostHog, Vitest, Jest.
- **UI/UX Design:** Figma, design systems, custom theming, responsive and RTL layouts, motion design (GSAP), Adobe Illustrator and Photoshop — *dribbble.com/0xa7md* / *behance.net/0xa7md*
- **Also:** Web security fundamentals (OWASP Top 10, Burp Suite), React Native (Expo).

EXPERIENCE

Software Developer (Contract) 2026
Maham Tech — Mham Expo, enterprise exhibition management platform

- Worked on an enterprise ERP-style platform (Laravel 12 API + React 19 monorepo, 1,000+ API routes) for exhibition and venue management.
- Built and debugged core financial modules, including journal entry creation, tax calculation, and entry-submission workflows synced to the general ledger.
- Diagnosed and fixed unbalanced ledger entries (debit/credit mismatches) that affected financial data integrity.
- Developed the unit and lease management view (occupied, shared, and vacant units) across exhibition halls.
- Implemented document parsing in the HR module to auto-fill employee records from uploaded documents.
- Performed authorized security reconnaissance, reporting a known nginx CVE, an exposed Swagger/OpenAPI endpoint, and missing HTTP security headers.

PROJECTS

Talluq — AI Productivity & Wellness SaaS 2025
talluq.vercel.app | *Private codebase, walkthrough available on request*

- Built an Arabic-first (RTL) SaaS combining nutrition, workouts, habits, and focus tracking on Next.js 16 and React 19, with a **35+ table PostgreSQL schema** (Drizzle ORM, Better Auth).
- Integrated two AI features through the Vercel AI SDK: Google Gemini vision for meal-photo calorie and macro analysis, and an OpenRouter/DeepSeek coach that generates schema-validated workout plans.
- Implemented subscription billing with Polar across three tiers (Free, Starter, Pro), with idempotent webhook processing and per-tier daily AI quotas.
- Designed a gamification economy (90+ badges, seasonal challenges, in-app shop) where every currency movement passes through an idempotent ledger.
- Shipped an installable PWA with Web Push (VAPID), scheduled jobs (Vercel Cron, Supabase Edge Functions), realtime support chat, Upstash Redis rate limiting, and Sentry and PostHog monitoring.

Sawakhen ERP — Multi-Branch Restaurant Back-Office 2025 – 2026
sawakhen-erp.vercel.app | *Evolving into a SaaS product; private codebase*

- Built a full Arabic (RTL) back-office covering recipes, procurement, inventory, production, inter-branch transfers, stocktaking, cash and expenses, and HR, as a Next.js 16 full-stack app with 17 pages wired to a live REST API.
- Designed a **48-table PostgreSQL schema** (Drizzle ORM) and a transactional stock-posting engine: every movement goes through one ledger transaction with FEFO batch consumption, frozen unit costs, and exact decimal money math.
- Implemented per-branch RBAC (38 permissions, 3 system roles) through a single route wrapper that enforces authentication, permissions, Zod validation, and audit logging.
- Added Mistral OCR to turn invoice images and PDFs into pre-filled forms, plus an in-app AI assistant with tools that read live system data.
- Built a **Model Context Protocol (MCP) server** that lets AI agents such as Claude query operational data through OAuth-secured tools.

Verba — Adaptive English Learning Platform 2026
verba-sa.vercel.app

- Built a typing-based platform where Arabic speakers learn English by typing professional conversations (963 exchanges across 20 topics, a 2,600-word Arabic glossary).
- Designed an adaptive difficulty engine and a spaced word-review system that detects hesitation from wrong keys, corrections, and pauses relative to each user's rhythm.
- Kept typing latency low with a render-free hot path (refs and requestAnimationFrame instead of per-keystroke state updates).
- Made progress work offline-first, with a network-resilient sync queue, server-side integrity checks, and SQL-ranked, opt-in leaderboards (Next.js, Supabase, Drizzle, Clerk).
- Covered the core logic with **196 automated tests** (Vitest).

Other Projects

- **Freelr** (SalamHack 2025, team of two): AI financial platform for freelancers with invoicing and Gemini cashflow forecasting; led UI/UX and frontend architecture. freelr.vercel.app
- **Bannaa:** Arabic construction management platform (contracts, payments, daily logs) with AI extraction from invoices, photos, and voice notes (TanStack Start, Supabase).
- **RevuHub:** Fully automated bilingual tech blog; an n8n pipeline researches, writes, and publishes articles (Astro, Supabase, Gemini). revuhub.vercel.app

EDUCATION

High School Diploma — Natural Science Track 2026
Annadheem Secondary School, Riyadh, Saudi Arabia | GPA: 98.54%
Self-taught in software development since middle school.

LANGUAGES

Arabic (native) | English (intermediate, B1–B2)
